Continued recommendation that domestic wells require a minimum production rate of 10-gallons per minute.

Recommend the use of the "BUILDING VALUATION DATA – April 1998" for determining building "valuation" for all construction or actual contract cost which ever is greater. The building "permit fees" will be calculated in compliance with 1997 UBC (see attached).

Building permits will be valid for 180 days in accordance with the above listed codes. Inspections must be called for within 180 days from issuance of permit or permit is void. Permit may be kept current by calling for inspections within this time frame. However, if no inspections are called for and the permit becomes void, it may be renewed for one-half of the building fee.

Inspection costs are covered by the permit issued unless:

- > an inspection is called for twice and the builder has not passed inspection, the follow-up inspection will require a "Special Inspection" fee; or
- > an inspection is called for and the site is not ready when the inspector arrives, the follow-up inspection will require a "Special Inspection" fee.

The "Special Inspection" fee is \$50.00 per hour, minimum one hour. All "special inspection" fees are payable prior to a certificate of occupancy being issued.

For use of outside consultants for plan checking and inspections, or both, actual costs will be charged to the permit applicant.

At the request of numerous building officials, Building Standards offers the following building valuation data representing average costs for most buildings. Because restdential buildings are the most common for many cities, two general classes are considered for these, one for "average" construction and the other for "good." Adjustments should be made for special architectural or structural features and the location of the project. Higher or lower unit costs may often result.

The unit costs are intended to comply with the definition of "valuation" in Section 223 of the 1997 Uniform Building Code<sup>200</sup> and thus include architectural, structural, electrical, plumbing and mechanical work, except as specifically listed below. The unit costs also include the contractor's profit, which should not be omitted.

The determination of plan check fees for projects reviewed by the International Conference of Building Officials will be based on valuation computed from these figures,

hich were established in April 1998.
